Telecom Services

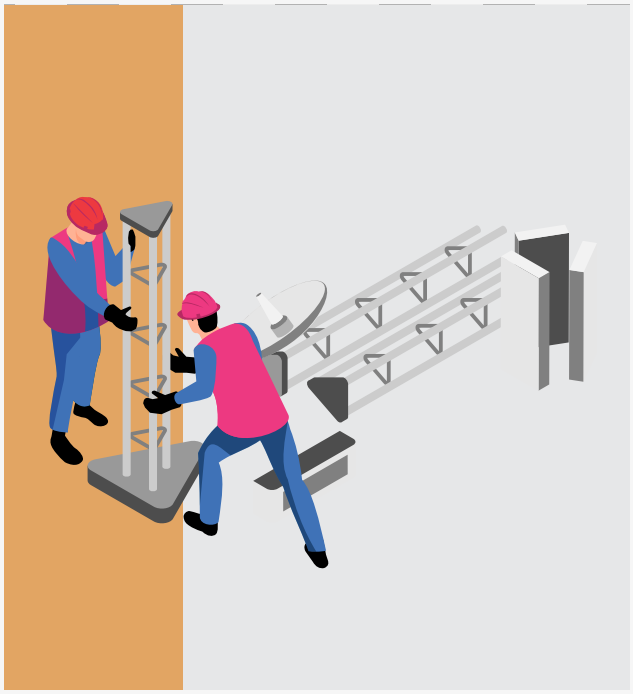

Introduction Telecom Services:

Esnad (Information Technology and Business Solutions) is a leading provider of comprehensive IT and business services across Saudi Arabia. With a strong reputation for delivering cutting-edge solutions, we have successfully served key sectors, offering innovative technologies that drive business transformation. Esnad continues to expand its service offerings to meet the evolving needs of businesses, now introducing Telecom Services to our extensive portfolio.

Our Services

Telecom Services (New): Offering telecom infrastructure and services including network design and implementation, mobile and fixed-line connectivity solutions, 5G network services, and managed telecom solutions. We work with leading telecom providers such as Zain, STC, and Mobily to ensure seamless communication and network stability across various sectors.

Networks & Network Security: Providing end-to-end networking solutions, including LAN, WAN, and data center networks, with robust security protocols. We specialize in network security, ensuring the integrity, confidentiality, and availability of your critical data.

Our Services

- **Intrusion Detection and Prevention Systems: Offering advanced systems to monitor and prevent unauthorized access, ensuring comprehensive protection for IT infrastructure.**
- **Nd-Point Support: Comprehensive support services for end-user devices, ensuring smooth operations and troubleshooting assistance for desktops, laptops, and mobile devices.**
- **Managed IT Services: Providing full-service IT management, including 7/24 monitoring, helpdesk support, and disaster recovery solutions.**
- **Cloud Solutions: Offering scalable cloud-based services for data storage, applications, and business processes.**

Sample Projects and Collaborations:

Esnad has collaborated with major telecom operators such as Zain, STC, and Mobily, providing telecom infrastructure and network solutions that align with their high standards of service.

- **Stc Project - Network Security Implementation:** We successfully deployed a comprehensive network security solution across STC's regional hubs, ensuring secure data transmission and protecting their infrastructure from cyber threats.

- **Zain - Telecom Infrastructure Expansion:** We partnered with Zain to design and implement an extended telecom infrastructure that supports 5G network capabilities, enhancing connectivity for customers in remote areas.

- **Mobily - End-to-End IT and Telecom Integration:** Esnad provided a full telecom and IT integration solution for Mobily's business sector, delivering robust network infrastructure and 7/24 managed support services.

Expertise & Domains:

Telecom Infrastructure Design: Specializing in the design and deployment of modern telecom networks, including 5G and fiber optic networks.

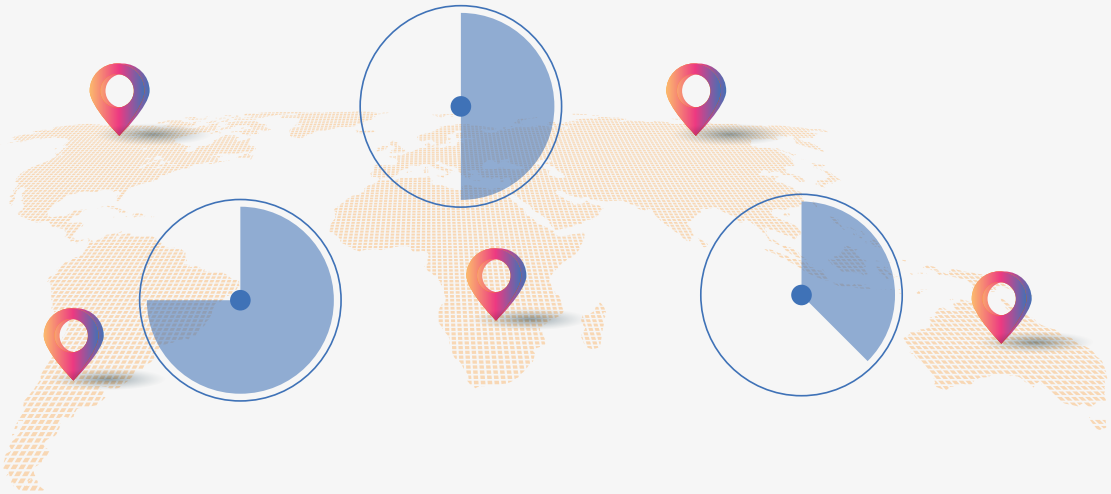

Network Security & Firewalls: Experts in implementing advanced network security solutions such as firewalls, intrusion detection systems (IDS), and intrusion prevention systems (IPS).

Data Center Networking: Setting up and managing secure, scalable data center networks to ensure continuous, secure operations.

Endpoint and End-User Support: Comprehensive support for all endpoint devices to ensure optimal performance and quick issue resolution.

Cloud and Virtualization Solutions: Expertise in cloud-based network solutions and virtualized environments for scalable, flexible business operations.

Geographic Coverage: Esnad proudly serves businesses across all cities in the Kingdom of Saudi Arabia. We have successfully completed projects in key regions, including Riyadh, Jeddah, Dammam, Makkah, and Medina, and continue to extend our services to ensure every corner of KSA has access to world-class IT and telecom solutions.

About Esnad

Esnad is a leading Information Technology solutions provider in the Kingdom of Saudi Arabia, committed to delivering innovative and reliable IT services to businesses across various industries. With a deep understanding of the technological landscape and a customer-centric approach, we empower organizations to achieve their strategic goals through technology.

1.Telecom Services (Newly Added)

- **Network Planning and Design:**
  Crafting scalable and efficient network architectures tailored to client needs.
- **Implementation and Integration:**
  Seamless deployment of telecom solutions with existing infrastructures.
- **Optimization and Maintenance**
  Continuous improvement and support to ensure optimal network performance.
- **Managed Telecom Services**
  End-to-end management of telecom operations, allowing clients to focus on core business activities.

2.Network Solutions

- **Nfrastructure Development:**
  Building robust network foundations for reliable connectivity.

- **Wireless and Wired Networking**
  mplementing flexible networking solutions for diverse environments.

3.Network Security

- **Threat Assessment**
  Identifying vulnerabilities within network systems.

- **Security Protocol Implementation**
  Deploying firewalls, encryption, and secure access controls.

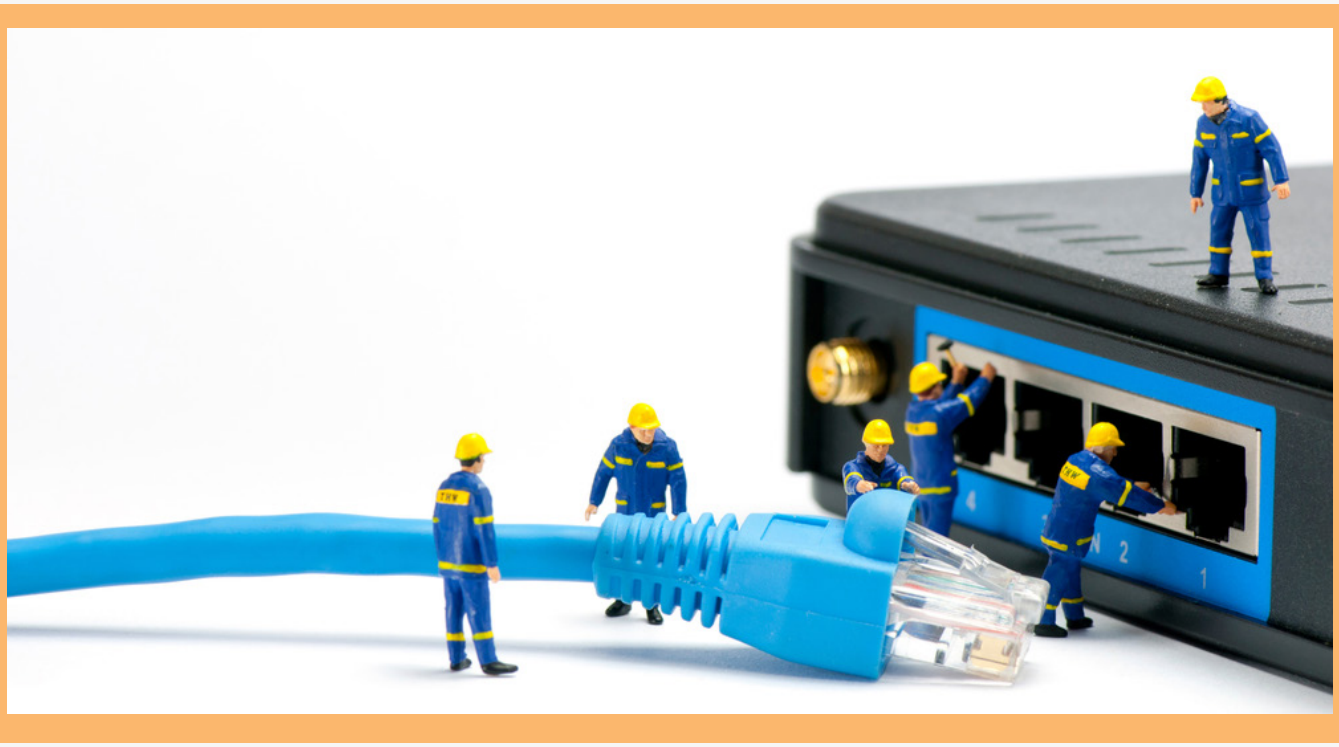

- **Ntrusion Detection and Prevention Systems**
  Real-time monitoring to protect against unauthorized access and attacks.

4. End-Point Support

- **Device Management**
  Overseeing all end-user devices for optimal functionality.

- **Security Updates and Patch Management**
  Ensuring devices are up-to-date with the latest security measures.

- **Technical Support**
  Providing prompt assistance to resolve technical issues.

Expertise and Domains

1. Network

- Specializing in the development of complex network systems that are both scalable and secure.
- Expertise in both traditional and next-generation networking technologies.

2. Network Security

- Proficient in safeguarding networks against internal and external threats.
- Utilizing advanced tools and protocols to maintain data integrity and confidentiality.

3. Intrusion Systems

- Implementing sophisticated intrusion detection and prevention systems.
- Continuous monitoring and analysis to preempt and respond to security breaches.

4. End-Point Support

- Managing a wide array of devices including desktops, laptops, mobile devices, and IoT devices.
- Ensuring consistent performance and security across all end-points.

Sample Projects and Collaborations

Esnad has successfully partnered with major telecom operators in Saudi Arabia, delivering high-impact projects that have enhanced their service delivery and security posture.

Zain

Project : Network Enhancement Initiative

- Upgraded network infrastructure to improve bandwidth and reduce latency.
- Implemented advanced security measures to protect against emerging threats.

Stc (Saudi Telecom Company)

Project : Comprehensive Telecom Services Deployment

- Provided full-scale telecom services including network design, implementation, and support.
- Deployed intrusion prevention systems to secure network operations.

Mobily

Project : End-Point Security and Support

- Managed end-point devices across multiple locations.
- Ensured all devices were secured with the latest security protocols and software updates.

Geographic Coverage

With a strong presence across the Kingdom, Esnad proudly serves clients in all cities and regions of Saudi Arabia. Our extensive network enables us to deliver prompt and efficient services, ensuring that clients receive the support they need, wherever they are located.

Why Choose Esnad

Proven Track Record

- A history of successful projects with leading organizations in the telecom sector.

Expert Team

- A dedicated team of professionals with deep expertise in IT and telecom services.

Customer-Focused Approach

- Tailored solutions that meet the specific needs of each client.

Nationwie Reach

- Ability to provide consistent service quality across all regions in KSA.
